Franklin Park Lawn Seed

OUR SPECIALTY

Trade Mark Registered

The mixture of grass seeds we sell under this name is made from the identical formula used by Park Commissioners of the city of Boston in their work of laying out the beautiful lawns and terraces which add such a charm to our new parks.

The Franklin Park Mixture gives a fine, smooth, velvety sward within a very few weeks after sowing. It is composed of clean seed of the finest and most desirable permanent grasses known, and it contains no chaff nor foul seeds. Weight per bushel, about 32 pounds.

The very great demand for this lawn seed has necessitated our having the name "Franklin Park" registered as a trade mark, in order to protect ourselves from imitators.

September and October are the most favorable months for sowing.

We put this seed up in packages—all of which bear our name—containing quantities as follows:

64 lbs., sufficient for one acre	\$15 00
32 lbs., sufficient for one-half acre	7 50
16 lbs., sufficient for one-quarter acre	4 00
Price per pound	30

FINEST ENGLISH MIXTURE

This mixture, made from our own formula, we have sold for many years, and it has given very general satisfaction. Weight per bus., 16 lbs. Per ½-lb. (1 qt.) 20 cts.; per lb. (2 qts.) 35 cts.; per bus. (16 lbs.) \$4.

SEEDS FOR GOLF LINKS

A special mixture for fair greens. Per bus., \$4.

A carefully prepared combination of grasses, for sowing on Putting Greens, to produce a dense, close sward. Per bus., \$5.

SEEDS FOR SHADED LAWNS

Fine grasses, especially selected for locations partially shaded by buildings or trees. Per qt. 30 cts., per pk., \$1.75; per bus., \$6.

Add 8 cts. per lb. to prices of all grasses if wanted by mail

HYACINTHS

Garden Culture.—The bulbs may be planted from September to December in any good, well-drained garden soil, which, however, should be well enriched and dug at least 18 inches deep. They should be set 6 inches apart and 4 to 6 inches deep. Before the ground freezes cover the beds with leaves or other good litter to keep out the frost. The covering can be kept in place by wire netting or boughs, and should gradually be removed upon approach of warm weather in spring. The bulbs should be left until the foliage turns yellow, when they may be lifted, dried off, and kept in a dry cool place for replanting.

Culture in Pots.—Select solid, heavy bulbs and plant as early as possible, using a 4 or 5-inch pot for a single bulb. Fill the pots with a light, rich potting soil, and have the top of the bulb just below the surface, give a good watering and set away in a cool place, covering them with about 5 inches of sand or coal ashes. This prevents the bulb from rising while the roots are growing, and keeps them quite moist. In about eight weeks they may be taken to the room in which they are to flower. By bringing in a few pots at a time about two weeks apart a succession of bloom may be had.

Culture in Glasses.—The single varieties are best adapted for glass culture, and the best named sorts should be selected. Use soft water for filling the glasses, and allow the bottom of the bulb to just come in contact with the water. Keep in a dark, cool place until the roots are about 6 inches long, when they may be brought into light and warmth to bloom. Add water occasionally as it evaporates, and the nearer they can be kept to a temperature of 60 degrees F. the better will be the results.

CHOICE UNNAMED HYACINTHS

These are made up of varieties selected for beds and borders, or for forcing for cut-flowers, and are of such superior quality as to be entirely satisfactory to florists, who use large quantities of them.

Six sold at the dozen rate, 25 at the hundred rate

WHITE ROMAN HYACINTHS

EARLY ROMAN HYACINTHS

A charming class, specially adapted for forcing and house culture, each bulb producing several graceful spikes of delicately perfumed flowers. They may be had in bloom from November to spring, by early and successive plantings and treating as recommended for Hyacinths on page 1. Bulbs may be planted close together, and in pots and pans of six or more bulbs are very effective.

MAMMOTH-FLOWERING CROCUS

CROCUS

MAMMOTH-FLOWERING NAMED VARIETIES

These are large, selected bulbs of the best varieties, and are noted for the immense size and quantity of their flowers and richness of color. **The small, cheap bulbs we do not handle, as they fail to give satisfaction.**

One of our earliest spring flowers, brilliant and universally admired, occupying a prominent place in every garden. It thrives in any soil or situation, but to be had in highest perfection should be grown in a deep, rich, sandy loam and a sunny location. Plant 2 or 3 inches apart and 3 inches deep. Best results are obtained from early planting.

Tulips and Hyacinths got from you last fall were the best ever seen in this vicinity.—W. H. SAWTELL.

TULIPS

Universal favorites and always attractive on account of the beauty, brilliancy and variety of color, which make them one of the most popular flowers for early spring display in the garden, or for winter flowering in house and conservatory. They are extremely hardy and of easy culture in any good garden soil, seldom failing to give the greatest satisfaction. Clumps of double and single sorts planted together among the shrubs and perennials will give a longer season of bloom than if either were planted alone. The bulbs should be set 3 to 4 inches deep and 4 to 6 inches apart. Culture as recommended for hyacinths, page 1.

NEW DARWIN TULIPS—SINGLE LATE, or MAY-FLOWERING

A recently introduced and most beautiful race of the self-colored or Breeder type. The flowers are very large, of symmetrical form, and are borne on tall, strong stems, often 2 feet high. They by far surpass in colors and brilliancy anything before known in Tulips. The colors are so glowing and bright that in the sunlight the effect is fairly dazzling. They include almost every conceivable color and shade.

NARCISSI, or DAFFODILS

In the front rank of popularity is placed this most beautiful and fragrant of our flowering bulbs, doing well in almost all soils and situations—among the grass, under trees, and in shady borders. Once planted they need no further attention, as they multiply and give larger and finer results each year. For house culture they are equally desirable and should be treated as recommended for hyacinths. They are perfectly hardy, except the Polyanthus varieties, and these, with a good covering to exclude the frost, will give larger and better flowers than when grown inside.

DOUBLE NARCISSI, or DAFFODILS

CHINESE SACRED, OR ORIENTAL NARCISSUS

If desired by mail, add 5 cents each for postage

The Chinese Sacred Lily (*Narcissus Orientalis*) is of easy culture and readily brought into bloom when grown in water. Shallow dishes are used in which the bulbs are placed with enough fancy pebbles to hold them upright when in bloom. The flowers are mostly white with yellow or orange centers and very fragrant.

Large Bulbs, 10 cts. each, 3 for 25 cts., \$1 per doz.; original baskets of thirty bulbs, \$1.75 per basket.

Miscellaneous Bulbs

ACIDANTHERA BICOLOR

Most valuable of all the Cape bulbs for beauty and fragrance of the flowers. They grow about two feet high, with graceful flower-stalks, each stalk having from four to eight beautiful creamy white flowers with a purple-maroon blotch at the base of the petals. They may be forced in winter like gladiolus, but better results will be had by planting in the open ground about June 1, when they bloom freely during August and September. The bulbs must be kept very warm through the winter. 15 cts. each, \$1.50 per doz.

AGAPANTHUS (African Lily)

Splendid ornamental plants for growing in pots or tubs for the lawn or piazza, bearing large clusters of flowers on long stalks, opening in succession for a long period during summer and autumn. They are rapid growers and gross feeders. Plenty of water should be given during growth and they should not be allowed to become rootbound.

Umbellatus. Bright blue. 25 cts. each, \$2.50 per doz.; by mail, 35 cts. each.

ACHIMENES

One of the finest summer-blooming plants for house or conservatory, giving handsome flowers of many charming shades and colors. Ready in January.

Named Varieties, 10 cts. each, \$1 per doz., \$6 per 100.

LILIES

In the bulb garden Lilies rank first in importance, and for general effect they have no rivals. Bulbs should be planted 6 inches deep as soon as they can be obtained after ripening, some being ready in August, while others are not ready till October or November. They thrive best in a well-drained, deep, loamy soil, made

rich with thoroughly rotted cow or sheep manure, and an inch of clean sand placed under and over the bulbs when setting; manure should not come in contact with the bulbs, as it causes decay. Top-dressing is the better way to enrich the soil after the bulbs are once established. The beds should be well covered in the fall with any good litter that will exclude the frost.

MUSHROOM SPAWN

American Pure Culture

Mushrooms are propagated from spawn, and the selection of spawn is as important to the mushroom grower as the selection of seed is to the farmer, the gardener or the fruit-grower.

The pure culture method of raising spawn was discovered by Dr. Duggar in 1903. Since that time extensive tests have been made, and a company was formed with a view of producing it in commercial quantities. A few thousand bricks were placed on the market last year and used by our best and most progressive growers. We have yet to hear from a single one who will return to the old-fashioned spawn at any price. Some growers were so surprised at their success with the new spawn that they carefully concealed it from their neighbors and suggested that the production of pure culture spawn be curtailed, fearing that by its general use Mushrooms would become too plentiful and consequently too cheap.

This objection is not well founded, however, for the **improvement in the quality and flavor of the Mushroom** will stimulate the demand to the same extent that the demand for fruit has been increased since the grafting process has displaced seed planting.

Select List of Hardy Perennial Plants

We would recommend those who have never undertaken the culture of Hardy Plants to commence with a few varieties most easily grown, and gradually increase their collections from season to season, and, our word for it, it will lead to a confession that there is nothing in the way of bedding-out or ribbon gardening which can compare in any way to the beauty and refined charm of this class of plants. We can furnish a good selection of Hardy Plants, which may be expected to give successional bloom throughout the spring, summer and fall months, and, if the choice is left to us, will take special care to select such varieties as afford the most satisfactory results.

ROSES

HARDY HYBRID PERPETUALS

The Rose is the one plant that needs no praise and little comment. Every one knows the Rose, and no garden is ever satisfactory without its Rose-bed. The secret of success is simply this: Throw out the soil 2 feet deep, and put in any kind of manure 1 foot deep, incorporate it with earth a little, and then cover it with 4 inches or more of soil, then plant the Rose bushes firmly, and fill up with good soil. Roses should be planted very deep, except in very clayey soils.

The Rose-bed should be in the full sun, if possible, and the surface be left a little hollow, so that water may be put on in summer and settle to the roots. Such beds will be full of healthy bushes and glorious blossoms.

Strong, 2-year-old, dormant plants, 30 cts. each, \$3 per doz., by express only

SMALL FRUITS

BLACKBERRIES

To keep a Blackberry bed in good productive condition, the old, weak and dead wood should be cut out every season, to give strength to the young shoots for the next year's bearing. In spring the weakest suckers should be removed, leaving five or six of the strongest in each hill; the ground should be spaded and a top-dressing of manure given. Rows 5 feet apart and plants 4 feet apart in the rows.

POT-GROWN STRAWBERRY PLANTS

The Strawberry will grow in any good garden soil where the ground has been thoroughly prepared. For family use we recommend planting them in double rows, 1 foot apart each way and 5 feet between the double rows, allowing sufficient number of runners to grow into the wide passage to cover about 1½ feet on each side; all the rest should be pinched off. It is advisable to cover the plants in winter with litter, which should be removed as soon as the plants commence to grow in spring.

Our pot-grown Strawberry plants are well-rooted, healthy plants, ready for shipment in August, and by setting them any time during August or September, a fine crop of fruit may be had the next season.

\$3 per 100

Brandywine. Large, glossy crimson; solid and fine flavor. Medium.
Commonwealth. The fruit is very large, symmetrical, and of a rich glossy color, with dark red flesh nearly as dark as Marshall. A great cropper, and a week later than Sample, which has been the standard late variety.
Golden Gate. New seedling, resembles the Marshall and will succeed where the Marshall fails. It produces strictly fancy, firm fruit clear to the end of the season, of a rich crimson color. \$1.25 per doz., \$5 per 100.
Glen Mary. One of the most productive; very large, highly colored, firm, excellent flavor. Medium.
Marshall. Large, rich, crimson, and fine flavor. Medium.
Sample. P. Very large, bright scarlet; handsome form, fine quality, very prolific. Late.
Success. The earliest large berry we know of, and, although early, it holds out well through the Strawberry season.

FERTILIZERS

PRICES SUBJECT TO CHANGE.

Pure Sheep Manure. We offer an exceptionally pure lot of this excellent fertilizer. It is a pure, natural manure and the most nutritious food for plants. Its effect is immediate, much more lasting and healthful than guano or any other manure. It is the best of all manures for mixing with the soil for greenhouse plants. It makes the richest, safest and quickest liquid manure, rivaling guano, without any deleterious effects. For flower or vegetable gardens, and as top-dressing for lawns, it is unequalled. Price, 6-qt. pkg., 25 cts.; 25-lb. bag, 75 cts.; 50-lb. bag, \$1.25; 100-lb. bag, \$2; ton, \$35.

Imperial Plant-Food Chemicals. Rich in phosphates, nitrogen and potash, the well-known essentials of plant life, combined in the best proportions ascertained from years of careful experimenting. They are entirely free from objectionable odor, and are particularly valuable for flower fanciers and horticulturists, for use in potted and garden soils, lawns and grass-plots. We offer the "Chemicals" in dry form as follows:—
